

Citroen DS5 Diesel Hybrid

Saturday, 09 May 2009

Apparently, Citroen plans to roll out their brand new DS5 diesel hybrid in 2011. According to the spokesperson, the diesel hybrid will utilize the HYbrid4 powertrain system which will become available sometime next year.

According to the HYbrid4 system which was unveiled at the Paris Motor Show, this particular system is different when compared to the hybrid systems in the market. The vehicle will be powered by both the diesel engine at the front wheels while the electric motor and lithium ion battery are mounted at the rear. The electric motor will provide on-demand all-wheel-drive and also electric-only operation at lower speeds.

Here's how the DS5 might turn out to be when it will be released sometime in 2011:
